### Agro Advisory

Crop	Stage	Advisory
General		<p>Rainfall is expected during this week, which will relive the heat stress during the later part of the week. The wind speed will be between 6 - 14 km/hr.</p> <p>Irrigation may be done based on soil moisture during afternoon hours and apply crop residue mulches to all irrigated crops to maintain sufficient soil moisture.</p> <p>Plan for summer ploughing against the slope with soil inverting type ploughs.</p> <p>The saline concentration of irrigation water of wells and bore wells normally increases in summer months and this will create yellowing or browning of leaves leads to death of lower leaves. This symptom normally occurs in tapioca due to saline water irrigation. The following management measures may be adopted to reduce the damage.</p> <ul style="list-style-type: none"> <li>• Frequent irrigation to keep the soil moisture wet and to avoid accumulation of salt in the surface of the soil.</li> <li>• Irrigation may be done during early morning or late evening hours.</li> <li>• Application of organic manure to neutralize the salt.</li> <li>• Spraying of good quality water during evening and morning hours.</li> <li>• Mixing of good quality water with well water for irrigation.</li> </ul>

Sugarcane	Vegetative	Considering the local circulation due to increased temperature and expected summer rains, provide propping to the sugarcane by tying opposite row to prevent from lodging.
Coconut		Summer rains during next two months may be harvested in root zone of coconut by deepening the tree basin with inward slopes. Till then, ensure to provide 100 liters of water per tree per day to maintain the productivity.
Animal Husbandry		<p>Increasing temperature and decreasing relative humidity may cause discomfort to the animals. Hence, provide clean water to both animals and poultry.</p> <p>Application of water over the sheds of the cattle and poultry will reduce the heat stress or even hanging of wetted gunny bags will also reduce the temperature to a considerable extent.</p> <p>To avoid the heat stress, animals feed the animal during night or early morning or late evening hours.</p> <p>Summer rains may occur as thunderstorm during the afternoon hours. Safeguard the animals.</p>

### **SMS advisory**

- Moderate rainfall with squally wind is expected. Hence farmers are requested to take suitable precautionary measures to avoid economical loss.
