Morning relative humidity is expected to be around 60 per cent and evening relative humidity is expected to be around 40 per cent. Average wind speed is expected to be around 16 - 18 km per hour and the wind directions will be from west south west direction.

### Agro Advisory

<b>General</b>		Since temperature is increasing, apply mulches to conserve soil moisture.
<b>Rice</b>	<b>Nursery</b>	The initial symptoms of the Blast will be seen as small spots in nursery. If so, mix the Carbendazim $\frac{1}{2}$ @ g/lit of water and spray it in the evening.
	<b>Main field</b>	Leaf mite incidence is being noticed in the Summer /early kuruvai paddy fields due to prevailing weather condition. Spray Dicofol @ 2.5 ml/ liter or fenazaquin 10 EC 2 ml/ liter, to control this pest or Spiromesifen 22.9 SC @1.2 ml/liter.
<b>Banana</b>		Provide support with wooden poles to avoid lodging of tree due to wind.
<b>Cattle</b>	<b>Cow</b>	As temperature is incensing, spread coconut leaves or paddy straws over the roof of the animal shed and spray cold water to reduce heat stress to the animals.
		When the air temperature is above 35 degrees Celsius the dairy cattle tend to drink more water thereby decreasing the Dry Matter Intake (DMI). Hence to overcome this succulent protein rich green fodder mixed with green fodder may be provided to livestock.

### **SMS advisory**

Since temperature is increasing, apply mulches to conserve soil moisture.
